

ATTRIBUTES & TRIAL DATA

Motley brand triticale is a high performance beardless (awnless) triticale. It is facultative and can be planted spring or fall.

In trials Motley was a top performer. Average height is about six inches shorter than similar varieties but it yields more tons per acre due to an abundance of broad green leaves.

While other varieties achieve high yields by producing long stems, Motley tonnage comes from its leaves. The shorter height reduces the risk of lodging.

Motley is an early maturing variety comparable to Surge. It matures a few days earlier than Gunner, and approximately 8-10 days earlier than FX 1001. Early maturity makes Motley a strong candidate for growers in a corn program.

Motley is a PVP Variety. Unauthorized propagation prohibited. Motley is a TM of Northern Agri Brands, LLC.

5 Year Trial Data, Seven Locations

Year	2022	2021	2021	2021	2020	2020	2020	2019	2019	2019	2018
Location	Cedar City, UT	Cascade, IA	Imperial, NE	Fort Collins, CO	Imperial, NE	Idaho Falls, ID	Othello, WA	Othello, WA	Idaho Falls, ID	Bozeman, MT	Bozeman, MT
Motley	5.06	18.20	11.90	7.40	9.60	5.90	4.50	5.10	4.40	2.80	4.10
Flex 719	4.90	16.40	11.00	7.40	9.00	5.80	5.20	5.50	4.00	2.40	3.60
Gunner	5.20	12.60	13.80	7.40	8.50	5.20	4.30	5.40	4.50	2.70	4.50
FX 1001	4.30										
Surge	4.16										
Forerunner	3.76										
7 Location, 5 Year Average:										Motley:	7.18 Tons/Acre
										Flex 719:	6.84 Tons/Acre
										Gunner:	6.74 Tons/Acre

In our Cedar City trial we compared several top varieties next to Motley (far right). Though Motley is shorter, it's heavy, dark green leaves produce higher tons per acre.
