The Attribute® II trait stack from Syngenta is the latest breakthrough in above-ground insect protection for sweet corn, delivering unsurpassed control of lepidopteran pests to maximize yield, quality, and productivity. The trait stack includes tolerance to glyphosate and glufosinate herbicides approved for application over the top of Attribute® II sweet corn varieties.

The introduction of the Attribute® II trait stack continues the Syngenta tradition of providing high-performance traits to sweet corn growers, and now it has the added power of Vip3A — a unique mode of action proprietary to Syngenta. The combination of Vip3A with Cry1AB, the protein found in Attribute® insect-protected sweet corn varieties, offers excellent control of key yield-robbing insects including European corn borer, corn earworm, and fall armyworm. Attribute® II is also highly effective against Western bean cutworm, which has emerged as a serious and growing threat in many production areas.

Sweet Corn, Quick Trip

Sweet Corn, Remedy

Attribute® II Sweet Corn

SKU	VARIETY	DAYS	COLOR	EAR LENGTH	EAR DIAMETER	ROW COUNT	PLANT HEIGHT	EAR HEIGHT	DISEASE	TRAIT STACK	COMMENTS
